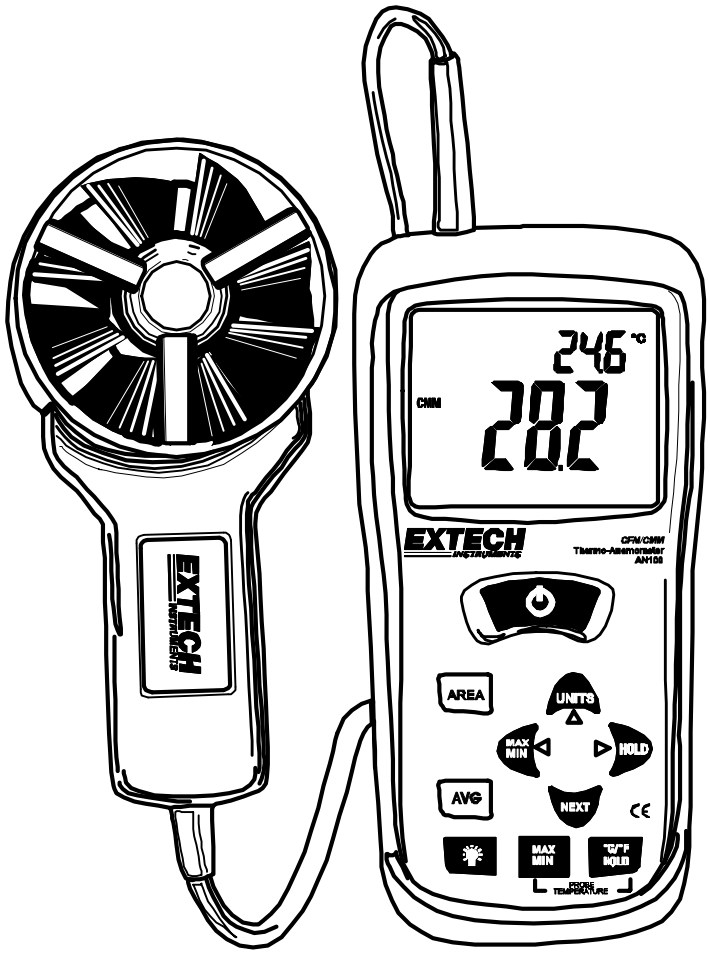
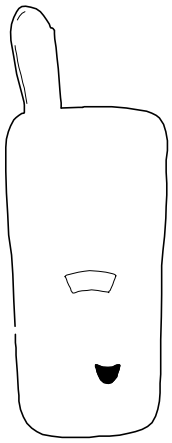
User's Manual

EXTECH INSTRUMENTS

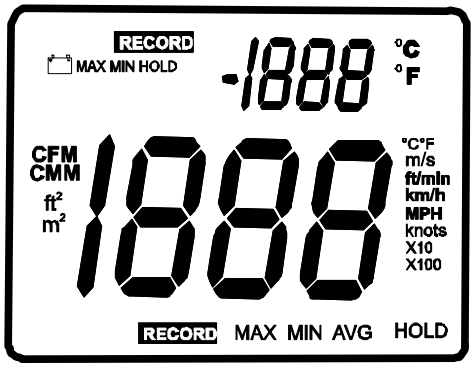
CFM/CMM Thermo Anemometer

Model AN100





Display Layout



- **MAX** (top of LCD): Max Hold function engaged for the Air Temperature function
- **HOLD** (top of LCD): Data Hold function engaged for the Air Temperature function
- **VEL**: indicates that meter is in air velocity mode
- **FLOW**: indicates that meter is in air flow mode
- **MAX** (bottom of LCD): Max Hold for the IR Temperature and RH function
- **HOLD** (bottom of LCD): Data Hold for the IR Temperature function and RH function
- **°C / °F**: Temperature units of measure
- **CFM/CMM**: airflow units of measure
- **Ft², m²**: units for area dimensions
- **m/s, ft/min, km/h, MPH, knots:** air velocity units of measure
- **X10, X100:** multipliers for air flow readings
- **AVG:** air averaging mode
- **RECORD:** indicates that min/max function is running (top for temp, bottom for air)
- Large LCD digits at center of display for Relative Humidity and IR Temperature
- Smaller LCD digits at top, right of display for Probe Temperature
- : Low battery indicator

Operation

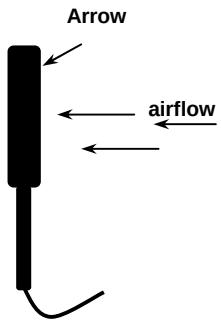
Connecting the Vane

1. The vane plug is inserted in the meter's sensor jack at the top of the meter. The plug and jack are keyed so that the plug can only fit in the jack one way.
2. Turn the plug carefully until it lines up with the jack and then firmly push the plug in place. Do not apply undue force or try to twist the plug side-to-side.
3. If the vane is not connected to the meter or if the sensor is defective, the LCD display will indicate **OL** in place of a Temperature reading.

Air Velocity Measurements (Single Point)

1. Turn on the meter using the ON/OFF ⏻ button.
2. Press **UNITS** button to select the desired unit of measure. **NOTE:** At power up the meter will display the last unit of measure previously entered.
3. Place the sensor in the air stream. Ensure that the air enters the vane as indicated by the arrow sticker placed inside the vane.
4. View the readings on the LCD Display. The large main LCD display shows the Air Velocity reading. The upper right LCD sub-display shows the temperature reading.

Side view of Vane

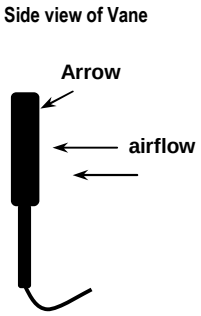


Air Velocity Averaging Mode

1. To enter 20 Point Averaging Mode, press and hold the **AVG** button until it beeps twice. The **AVG** icon will be displayed.
2. Take a measurement and press the **AVG** button. A single beep will sound and the **HOLD** icon will appear in the display.
3. The average reading will be displayed and number of readings measured will appear in the upper right hand corner of the display. After 5 seconds, the display will return to the current reading.
4. Repeat steps 2 - 3 until the desired number of points have been measured.
5. To return to standard velocity measuring mode press and hold **AVG** button until meter beeps twice.

Note: In the standard velocity measuring mode, press the **AVG** button once to recall the previous average. The average will be cleared when you enter the Averaging Mode again.

Air Flow Measurements (CMM / CFM)



1. Turn on the meter using the ⏻ ON/OFF button
2. Press the **UNITS** button to select the desired air flow units: CMM (cubic meters per minute) or CFM (cubic feet per minute). **NOTE:** At power up the meter will display the last unit of measure previously entered.
3. To begin entering the area in m^2 or ft^2, press and hold the **AREA** button until it beeps twice. The leftmost digit of the bottom display will begin to flash.
4. Use the ▲ (UP) button to change the flashing digit

   Use the ◄ (LEFT) button to move the decimal

   Use ► (RIGHT) button to select the other digits.

   After all of the digits are entered, press and hold the **AREA** button (until meter beeps twice) to save the area into memory and return to CFM or CMM measuring mode.
5. Place the sensor in the air stream. Ensure that the air enters the vane as indicated by the arrow sticker placed inside the vane. Refer to the diagram. The large main LCD display shows the Air Velocity reading. The upper right LCD sub-display shows the temperature reading.

The meter has 16 memory locations (8 for CFM and 8 for CMM) that can be used to store commonly used area sizes that you can recall at anytime.

1. Press the **AREA** button until meter beeps twice. A memory location number will appear in the top right of the display indicating the memory location.
2. Push the **NEXT** button to scroll thru and select the desired location. Once you have selected the desired memory location enter your dimension

   Use the ▲ (UP) button to change the flashing digit

   Use the ◄ (LEFT) button to move the decimal

   Use ► (RIGHT) button to select the other digits. After all of the digits are entered, press and hold the **AREA** button (until it beeps twice) to save the area into memory and return to CFM or CMM measuring mode.

To select and use a previously stored dimension, press and hold the **AREA** button until it beeps twice.

Press **NEXT** to scroll thru the 8 memory locations. Press and hold the **AREA** button until it beeps twice to return to CFM or CMM measuring mode.

Air Flow Averaging Mode

1. To enter 20 Point Averaging Mode, press and hold the **AVG** button until it beeps twice. The **AVG** icon will be displayed.
2. Take a measurement and press the **AVG** button. A single beep will sound and the **HOLD** icon will appear in the display.
3. The average reading will be displayed and number of readings measured will appear in the upper right hand corner of the display. After 5 seconds, the display will return to the current reading.
4. Repeat steps 2 - 3 until the desired number of points have been measured.
5. To return to standard airflow measuring mode press and hold **AVG** button until meter beeps twice.

Note: In the standard velocity measuring mode, press the **AVG** button once to recall the previous average. The average will be cleared when you enter the Averaging Mode again.

Data Hold (Air Velocity/Air Flow)

1. While taking measurements, press the **HOLD** button to freeze the air velocity/air flow reading.
2. The **HOLD** indicator will appear in the bottom of the LCD display.
3. Press **HOLD** again to return to normal operation.

MAX/MIN/AVG Record (Air Velocity/Air Flow)

This allows the user to record and view the highest (MAX), lowest (MIN) and average

Battery Replacement

When appears on the LCD, the 9V battery must be replaced.

1. Disconnect the sensor.
2. Remove the meter's rubber protective jacket
3. Use a Phillips screwdriver to open the rear battery compartment
4. Replace the 9V battery
5. Close the battery compartment and replace the meter's protective jacket

You, as the end user, are legally bound (**Battery ordinance**) to return all used batteries and accumulators; **disposal in the household garbage is prohibited!**

You can hand over your used batteries / accumulators, gratuitously, at the collection points for our branches in your community or wherever batteries / accumulators are sold!

Disposal

Follow the valid legal stipulations in respect of the disposal of the device at the end of its lifecycle

WARNING: To avoid electric shock, do not operate the meter until the battery cover is in place and fastened securely.

NOTE:: If your meter does not work properly, check the fuses and batteries to make sure that they are still good and that they are properly inserted.

Specifications

Air Velocity	**Range**	**Resolution**	**Accuracy**
m/s (meters per sec)	0.40 - 30.00 m/s	0.01 m/s	± (3% + 0.20 m/s)
km/h (kilometers/hour)	1.4 - 108.0 km/h	0.1 km/h	± (3% + 0.8 km/hr)
ft/min (feet per minute)	80 – 5900 ft/min	1 ft/min	± (3% + 40 ft/m)
mph (miles per hour)	0.9 – 67.0 mph	0.1 mph	± (3% + 0.4 MPH)
knots (nautical MPH)	0.8 to 58.0 knots	0.1 knots	± (3% + 0.4 knots)
Air Flow	**Range**	**Resolution**	**Area**
CMM (cubic meters/min)	0-9999 m^3/min	1	0 to 9.999m^2
CFM (cubic ft/min)	0-9999 ft^3/min	1	0 to 9.999ft^2
Air Temperature	**Range**	**Resolution**	**Accuracy**
	14 - 140°F (-10 - 60°C)	0.1°F/C	4.0°F (2.0°C)

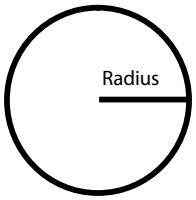
Circuit	Custom LSI microprocessor circuit
Display	Dual function 0.5" (13 mm) 4-digit LCD
Sampling rate	1 reading per second approx.
Sensors	Air velocity/flow sensor: Conventional angled vane arms with low-friction ball bearing
	Temperature sensor: NTC-type precision thermistor
Automatic Power off	Auto shut off after 20 minutes to preserve battery life
Operating Temperature	32°F to 122°F (0°C to 50°C)
Storage Temperature	14 to 140°F (-10 to 60°C)
Operating Humidity	<80% RH
Storage Humidity	<80% RH
Operating Altitude	2000 meters (7000ft) maximum
Battery	One 9 volt (NEDA 1604) battery
Battery life	80 hours approx. (if the Backlight is used continuously, battery life will be reduced significantly)
Battery Current	8.3 mA DC approx.
Weight	1.6 lbs. (725g) including battery & probe
Dimensions	Main instrument: 7.0 x 2.9 x1.2" (178 x 74 x 33mm)
	Sensor Head: 2.75" (70mm) Diameter

Useful Equations and Conversions

Area equation for rectangular or square ducts

Area (A) = Width (W) x Height (H)

Area equation for circular ducts



Area (A) = π x r^2

Cubic equations

NOTE: Measurements made in *inches*
must be converted to *feet* or *meters* before using the above formulae.

Unit of Measure Conversion Table

	m/s	ft/min	knots	km/h	MPH
1 m/s					
1 ft/min					
1 knot					
1 km/h					
1 MPH
